TITLE : SCREEN FILM FOR BULLETIN

ABSTRACT : PROBLEM TO BE SOLVED: To manufacture a screen film which is light-weight and small in size, is convenient to carry and extremely inexpensive by fixing two-folded long-sized films which are so formed as not to be easily bent to the top end or the top end and bottom end of the screen film formed, in such a manner that the film can be rolled.

SOLUTION: A two-folded long-sized films 20 which are so formed as not to be easily bent by two holding are fixed to the top end or the top end and bottom end of the screen film 10 formed, in such a manner that the film can be rolled. One piece or plural pieces of hangers 30 are removably mounted to the two-folded long-sized films 20. Each hanger 30 is formed by freely detachably coupling a pincher 31 and a hook 32 like a clothes pin and is pinched nearly at the center of the two-folded long-sized film 20. The hanger is hung peelably stuck to the hook 50 to a perpendicular surface 60 of a wall, curtain, etc. Then, the two-folded long-sized film can be hung stably to the perpendicular surface 60. According to this constitution, the screen film which is light-weight, small in size, convenient for carrying can be manufactured extremely inexpensively.
